

- Long-term potentiation
- head development
- regulation of proteolysis
- Kinase maturation complex 1
- response to axon injury
- GPCR downstream signalling
- Metabolism of carbohydrates
- HALLMARK KRAS SIGNALING UP
- regulation of ERK1 and ERK2 cascade
- regulation of intrinsic apoptotic signaling pathway by
- TP53 Regulates Metabolic Genes
- SUMOylation of RNA binding proteins
- Cyclin D associated events in G1
- nucleosome assembly
- regulation of reproductive process
- Nucleotide-binding domain, leucine rich repeat conta
- cell-cell adhesion
- regulation of DNA biosynthetic process
- fatty acid biosynthetic process
- peptidyl-lysine modification
